

## CATEGORIES FOR NATURAL WATER

"...that these dissolutions of the most varied chemical products, prepared in the vast laboratory of nature, may not be replaced by replicas produced only in pharmaceutical laboratories, despite the immense progress made by modern chemistry having surprised and revealed, as you might say, atom by atom, the secrets of their composition."

### Portugal Royal Decree of 1892

Certain types of water have been of great interest to humans, since ancient times, their being recognised for their unequalled healing and life-preserving properties.

At a time when we see the proliferation of problem due to the environmental pollution of this planet earth which is our home, more and more countries are acknowledging that natural mineral waters are a rich resource, which should be preserved at all costs.
